Portfolio, with a mock executive briefing: evmonaha880.github.io/portfolio/

Fourteen years in supply chain took me from a fulfillment center floor to the rooms where executives decide: a patient-experience company grown to 250 healthcare locations, nearly seven years at Google advising 165+ global enterprises, and a **briefing franchise read by the leadership of 700 client organizations**. Supply chain touches everything a business does, so it taught me to see companies whole, and a briefing is an operation in its own right: moving targets converging on one room. Today I run Bridgehead Labs, a supply chain × AI consulting firm, **built and operated on Claude**.

EXPERIENCE

Bridgehead Labs · Founder · Tiburon, CA 2026 – Present

- Built and published two reinforcement-learning environments that test AI agents on the GPU supply chain, the one AI itself runs on, under crisis conditions: a working showcase of what an AI-first consulting firm can build.
- Founded on demand: a consulting invitation arrived before the firm existed, so I built one in weeks, Claude agents standing up the LLC and the client tooling.
- Distilled classic consulting knowledge into “Consultant in a Box”: nearly 3,000 cited cards of frameworks and diagnostics, every recommendation carrying the page it came from.

Google · Supply Chain Consultant, International Growth Team (AMER) May 2019 – November 2025

THE ADVISORY PRACTICE

- The sole supply chain consultant in Google's sales organization for the Americas: advised clients across a wide spectrum of industries (eBay, Etsy, Bose, Peloton, Grainger, LVMH), eighteen engagements a quarter, on average three of them executive summits, each opened in discovery with the account team and the client's own operators.
- Engagements carried a minimum \$600K in Google deal value before I entered the room, roughly \$70M a year in attached revenue; the practice measured a 7% uplift in client export revenue following consultation.
- Authored the team's supply chain service menu: an eight-service offering shaped around clients' emerging needs, backed by a 14-partner referral network (DHL, Kuehne+Nagel).
- Adopted AI early: a hackathon demo paired an account's 10-K findings with Google data to build a brand-matched executive pitch in fifteen minutes.
- Promoted L5 to L6 in roughly two years; led the team's culture rebuild through open team-wide sessions that distilled the operating principles to a single page.

THE BRIEFING FRANCHISE

- Grew the State of Supply Chain Report (2020–2025) from a COVID ops impact tracking memo into a C-suite strategic briefing, tailored to its readers' conflicting mandates, that generated executive summits of its own.
- Matured the reporting into Reactive to Resilient, delivered as live crisis simulation: a tabletop for Walmart's head of global operations at their executive summit revealed their default East Coast port-strike plan would itself shut down the West Coast ports, caught with time to replan.

PROJECT GESTALT · THE EXECUTIVE SUMMIT PROGRAM

- Created Project Gestalt to turn the hardware supply chain from a cost center into a revenue channel: C-suite summits anchored in Google's own carrier relationships, run with no authority over any organization in the room.
- Built the J.B. Hunt co-marketing partnership, work that was written into the terms of the 2021 multi-year Google Cloud alliance and helped carry the deal over the line; then convened a supplier innovation consortium under the alliance.

Staples · Product Manager, Same-Day Delivery (2016–2018) · **Project Manager, Transportation** (2014–2016)
• **Supply Chain Leadership Rotational Program** (2012–2014)

- Staples Rush, zero to one: found that ~90% of B2B customers could be served same-day from store inventory, then took it from idea to live in six weeks, aligning 26 cross-functional teams that did not report to me, scaling to ~14 markets.
- Made the case for same-day delivery to a skeptical CEO, Shira Goodman, in her boardroom, killing the twenty-year compliance myth behind Staples' timid promises: tracing the feared FTC fine to its actual rule revealed a simple fix nobody knew existed. The organization had been obeying a story, not a regulation.
- Earned it on the floor first, through the Supply Chain Leadership Rotational Program: 400 associates across seven departments in a 350,000 sq ft fulfillment center, and a 60-driver daily final-mile fleet across DFW.

ChargeRx · CEO & Co-Founder (concurrent with the Staples role) · Boston, MA 2015 – 2018

- Sold a patient phone-charging solution on the metric hospitals are paid on, HCAHPS patient-experience scores; mining survey verbatims for charger mentions opened Memorial Sloan Kettering and the Cleveland Clinic.
- Repositioned toward the larger hospital-noise problem: unidirectional speakers beaming TV audio to the patient's bed alone, inaudible to anyone else in the room; won the Audience Choice Award at the MIT Sloan Healthcare Innovations Prize finals (2018). Exited profitably.

BOARDS & FELLOWSHIPS

- **H.H. Franklin Supply Chain Advisory Board, Syracuse University** · Member · 2022 – Present
- **Retail Management Institute, Santa Clara University** · Senior Fellow · 2019 – 2024

EDUCATION

Northeastern University, D'Amore-McKim School of Business · Executive MBA · 2015–2016

Syracuse University, Whitman School of Management · BS, Dual Major: Supply Chain Management & Entrepreneurship · 2008–2012
